

Pablo César Valenzuela Cárcamo

Technical Lead | Ex Founder & CTO | Digital Transformation | Artificial Intelligence | IT Project Management

pabloce.valenzuela@gmail.com | +56 9 7925 0156 | linkedin.com/in/pablo-valenzuela-carcamo |
pablocevalenzuela.github.io | Santiago, Chile

Executive Summary

Computer Engineer with over 14 years of experience leading critical technology projects and digital transformation initiatives in highly regulated organizations and startups. Ex Founder & CTO with experience defining technology strategy, leading multidisciplinary teams, managing portfolios of critical projects, and aligning technology with business objectives.

Specialized in cloud architecture, artificial intelligence, IT governance, project management, cost optimization, business continuity, and the adoption of software engineering best practices. Possesses both technical and executive vision and a proven ability to lead initiatives from strategy to implementation, coordinating teams, vendors, and stakeholders to generate measurable results.

Notable Achievements

- I was the CTO and founder of Ecoinput, a technology SME, where I defined and aligned the commercial strategy with IT governance and achieved product-market fit through strategic partnerships and sales.
- I led portfolios of critical technology projects for highly regulated organizations such as Banco Ripley, BBVA, the Financial Market Commission (CMF) and the Budget Directorate (DIPRES).
- I built and led multidisciplinary development teams (Scrum cells), promoting agile practices, DevOps and continuous maintenance.
- I implemented cloud-native solutions that reduced response times, improved scalability, and optimized operating costs.
- I led end-to-end software projects from requirements gathering to production deployment, training, support, warranty and maintenance.

Executive Skills

Leadership and Management

- Leadership of multidisciplinary teams.
- Project portfolio management and application of Scrum and PMI frameworks.
- Management of critical suppliers and stakeholders.
- Digital Transformation and Technological Roadmaps.

Strategy and Technology

- Technology strategy and roadmap aligned with the business.
- IT Government, Cybersecurity Data Governance, Innovation and Trade-Offs.
- Enterprise Architecture and Systems Design.

Operational Management

- Cost optimization and risk management
- Operational continuity and information security.
- Management of SLA, OKR, TCO and Time-to-Market.

Professional Experience

AI Software Engineer

Development of Artificial Intelligence initiatives

Santiago, Chile

November 2024 – Present

I'm currently working on a Proof of Concept (PoC) involving generative AI and agentic systems deployed on GCP, weighing implementation and provider options, and evaluating LLMs, RAG workflows, and cost-performance optimization for enterprise use cases. My focus is on understanding how to integrate AI effectively, responsibly, and scalably, ensuring alignment with the actual needs of organizations.

Responsibilities:

- Systems design, best practices, trade-offs, cost and performance optimization.
- Definition of quality metrics, budget, SDLC, RAG flow design and observability.

Results:

- ChatBot System PoC successfully completed for operational support and deployed in GCP.
- A 100% Task Success Rate is achieved, 4/4 tasks successfully completed.
- An Average Quality Score of 5/5 is achieved, a perfect score in all aspects of use cases.
- ISO 42001/ISO 23894 guidelines for risk management in AI.
- The average Cost Per Task is \$0.001497 USD and the average Tokens Per Task is 4,247 tokens/task.

Senior Software Engineer and Freelance Consultant

Software Development Projects as a Freelancer

Santiago, Chile

November 2024 – April 2026

I led and developed end-to-end software development projects for companies Truekazo SpA and Librería Bookland SpA, aligning the technological roadmap with business objectives and delivering successfully.

Responsibilities:

- Leadership and end-to-end development of the SDLC for Digital Transformation projects.
- Trade-offs, systems design and high-demand cloud-native architecture.
- Implementation of best practices DevSecOps and Cybersecurity.
- Budget management, coordination with GCP and Supabase suppliers, Chile.

Results:

- Truekazo: MVP core back-end solution completed in 3 months, improves core performance to $\approx$ p95 <410ms and Mobile App UX, reduces TTM $\approx$ 55%, cybersecurity with DevSecOps and reports progress to the General Manager.
- Bookland: Widget system integrated with Shopify and completed in 2 months, improves store UX and AOV, and a Back-Office system for operational business support completed in 2 months.
- Reduction of approximately 56% in SLA sales flow in store, increased AOV, reduced workload by approximately 60%, coordination with suppliers and stakeholders, and reporting of progress to the General Manager.
- Implementation of Information Security best practices/ISO 27001 with IAM/KMS.
- Cost optimization and automatic scalability for high-demand flows.

Senior Software Engineer and Freelance Consultant

Quantus - Agua Tierra SPA

Santiago, Chile

June 2024 – September 2024

I led and developed a solution end-to-end Web App MVP for irrigation canal management, trade-offs for high-demand architecture, technology roadmap and successfully completed project.

Results:

- Leadership and Development of the MVP SPA System SDLC, completed in 8 weeks and reporting to the Founder.
- Coordination with suppliers, stakeholders, consulting and trade-offs for production.
- Automation and security with Pipeline DevSecOps CI/CD that reduced TTM of features by $\approx 35\%$.
- High-demand, scalable, cost-optimized (TCO) cloud-native system optimized at $\approx p95 < 345\text{ms}$ / $\approx p99 < 0.6\text{s}$ and the improvement of the Mobile App customer UX and SLAs of the business.

Senior Software Engineer and Freelance Consultant
EHAC Group S.A.

Rancagua, Chile
October 2023 – April 2024

I led and successfully developed a digital transformation project for the business using a custom ERP system for operational support.

Results:

- Leadership and development of the SDLC of ERP system to digitize operations and completed in 7 months.
- Coordination with suppliers and stakeholders, tech-stack definition and improvements to key metrics (TCO).
- Lower infrastructure costs of approximately 60% through Pipeline CI/CD and cloud-native.
- TTM improvement of $\approx 45\%$ through Pipeline CI/CD and System performance at $p95 \approx 420\text{ms}$ and $p99 \approx 600\text{ms}$ with high-demand architecture (Serverless).
- Reduction of maintenance SLA from 4 to 1 HH through GCP TCO.
- Cybersecurity implementation through Pipeline DevSecOps and progress report to the CEO.

Senior Software Engineer and Freelance Consultant
Casablanca Transport S.A.

Santiago, Chile
August 2023 – September 2023

I led and successfully developed an end-to-end mini-CRM system to automate and digitize processes and manage quotes for the web channel, improving conversion and customer service.

Results:

- Leadership and development of the mini-CRM digitization system within a period of 8 weeks.
- Reduction of SLA of service requests via web channel in $\approx 65\%$ through automation.
- Coordination with suppliers and stakeholders.
- Feature TTM reduction of $\approx 40\%$ and improved Cybersecurity practices (ISO 27001).
- Operational cost budget for the solution and progress is reported to the Management Control PO.

Founder and CTO
Ecoinput - Digital Agency LTDA

Santiago, Chile
November 2019 – October 2023

I founded the startup, led its commercial and technological strategy, building the development area, defining the technological roadmap, leading customer services and the correct operation of the business.

Responsibilities:

- As CTO, the definition and alignment of the business model with tech-stack for services.
- Leadership and mentoring of the software development team (Scrum cell) and digital services.
- Tech roadmap leadership and innovation, IT governance, cybersecurity and trade-offs.
- Leader of the project portfolio, service management, budget, suppliers and key partners.
- implementation of best practices in project management (PMI/Scrum).

Results:

- Development of the technology roadmap, Business Model and alignment with the business in 6 months.
- Training in 2 months and agile cell leadership with 5 professionals and the start of operations.
- Strategic alliance with Partners of EE.UU (Shopify, Klaviyo) and the achievement of Go-To-Market.
- Project leadership and customer service, resource optimization, budgeting and scheduling.
- Pipeline Implementation DevSecOps(CI/CD) for a low delivery rate to customers.
- Chatbot development in 3 months that reduced SLA customer service in ≈45% and operating costs.

Project Manager / Scrum Master **Ripley Bank, Innovation Management**

Santiago, Chile
August 2017 – September 2019

Leadership of the portfolio of technological projects for financial services and critical core banking systems and agile Scrum cells insourcing and outsourcing.

Responsibilities:

- Leadership from the portfolio of 8 projects for consumer credit, checking accounts, car insurance and critical home-banking system.
- Leadership and mentoring of agile teams and oversight of the PMO's Capex budget.
- Supervision of key suppliers (IBM and Taisa) and coordination of Stakeholders and Product Owners.
- Coordination of solution deployment with teamDevSecOps, application of cybersecurity and ISO 27001 standard for compliance with Law 21.663 and SGSI.

Results:

- Mentoring an agile cell of 10 professionals in 3 months and leading PO sprints.
- Successful completion of the 8 critical projects in the led portfolio.
- Successful coordination of the Backlog, Dailys and Sprints with Scrum Team, Product Owners and Stakeholders.
- Successful budget monitoring and critical provider services (IBM and Taisa).
- Inter-project dependency management and global critical path mapping of business lines using the Project Management Instrument (PMI).
- Critical path of portfolio projects and exposure to stakeholders to optimize resources, risk management and deadline compliance.
- Report the status of the Portfolio to Management and Stakeholders every two weeks (Sprint).

Project Manager / Scrum Master **BBVA Colombia Bank. Tessi, Chile**

Santiago, Chile
February 2017 – June 2017

Responsible for the portfolio of digital transformation projects and software development for BBVA Colombia bank and critical core banking system, training and leadership of Scrum cell.

Results:

- I trained in 2 months, I led an agile team of 7 professionals to resolve the Product Owner's requirements for the core banking and mortgage module.
- Lead ReductionTime ≈41% through coaching and project governance with Scrum/PMI.
- Successful management of the portfolio of 3 digital transformation projects and reporting to the IT Manager of Tessi.
- Alignment of Chile's cell with OKRs, IT governance, cybersecurity and DevSecOps of Colombia.

Software Engineer **CMF (Commission for the Financial Market)**

Santiago, Chile
April 2016 – December 2016

The development of software components for institutional systems, automation of SDLC processes, management of internal projects, and coordination with the Product Owner.

Results:

- The successful development of the new components for the institutional intranet and private site that were requirements of the Product Owner and meeting the Sprint deadlines.
- Lead Time Reduction ≈50% through Pipeline CI/CD, DevSecOps and reporting to the Product Owner.

Software Engineer
DIPRES (Budget Directorate)

Santiago, Chile
August 2015 – March 2016

The development of features and bug fixes for the critical SIGFE System (Information System for the Financial Management of the State of Chile), coordination with teamDevSecOpsand application of Government standards of the internal software factory.

Results:

- Successful development and meeting deadlines for assigned Sprints of the SIGFE reporting module.
- Coordination with cybersecurity teams and DevSecOps and progress is reported to the Project Manager.

Rapporteur of CEnterprise Software Engineering courses
Linux Latin America, TechTraining, Formación Digital SpA

Santiago, Chile
July 2014 – November 2015

As a Computer Engineer and Speaker, I taught the courses on Critical Architecture and SOA, Enterprise and Scrum for the agile teams of Banco Falabella, Banco Scotiabank and Atcom Software Factory in Chile.

Results:

- Development of course and workshop contentpracticalfrom setting up environments for Oracle SOA Suite, Eclipse Framework, JDK, Java, JEE and deploying enterprise applications on IBM WebSphere Application Server (WAS) and Oracle WebLogic.
- CI successfully completed all the courses the consultant assigned me and reported to the Director.

IT Assistant
Cliniclsamédica

O'Higgins Region, Chile
October 2010 – March 2014

Responsible for daily level 1 and 3 (ITIL) technical support to internal clients of the clinic for critical systems and the development of custom software solutions.

Results:

- Microsoft Active Directory administration and Microsoft ecosystem credentials.
- End-to-end implementation of the Incident Management System for internal customer support.
- End-to-end development of an internal statistical management system in 6 months, covering SDLC.
- Creation of reporting through SQL views and stored procedures in the Clinical System database for the clinical project and intended for internal management.

Education

- **Diploma in Project Management (PMI/PMBOK)**, Pontifical Catholic University of Chile.
- **Computer Engineering**, Andrés Bello University / AIEP.
- **Computer Technician**, IP Santo Tomás.

Certifications and Seminars

- **Certification in AI & Machine Learning**, Google Cloud.
- **Postgraduate Diploma in AI & Deep Learning**, Stanford University and DeepLearning.ai.
- **Certification in AI Agent Systems Fundamentals**, Hugging Face.
- **Certification in AI Fundamentals and LLM**, Hugging Face.
- **Digital Product Design Seminar**, Pontifical Catholic University of Chile.
- **IT Innovation Seminar**, Pontifical Catholic University of Chile.
- **Cybersecurity Certification**, Cisco Networking Academy.
- **Certification in Data Governance**, Alation University.

Technologies and Standards

- **Cloud Computing**: GCP (Google Cloud Platform), Cloud Run, Compute Engine and Docker.
- **Programming Languages**: Python, Java, Java EE, JavaScript, and TypeScript.
- **AI**: Python, LangGraph, LangChain, LangSmith, Pandas, Pytorch and Hugging Face.
- **Frameworks**: FastAPI, Django, React y Tailwind CSS.
- **High-demand Computer Systems**: Celery y Redis.
- **Monitoring, Testing & QA Apps end-to-end**: Sentry, Pytest and Ruff.
- **Databases**: PostgreSQL, Oracle, MySQL, MongoDB and GraphQL.
- **CyberSecurity & Data Governance**: ISO 27001 and IAM/KMS from GCP and Alation.
- **DevOps y DevSecOps**: GitHub Actions, CI/CD, IaC, Git and GitHub.
- **Project Management and Administration**: Jira, Confluence, Scrum and PMI/PMBOK.
- **Systems Architecture and Design**: REST APIs, Microservices, Cloud-Native, DDD y SOLID.

Languages

- **Spanish**: Native.
- **English**: B2, intermediate.
